

DIR -> Foxit SDK -> PDF

This sample DIR is read from JSON and lowered with the real Foxit Linux SDK.

Layer	DIR object	Foxit lowering
page	page metadata	PDFDoc::InsertPage(width, height)
object	text/image/path	TextObject / ImageObject / PathObject
attribute	font/color/position	SetTextState / SetFillColor / Transform

Second page from the same DIR

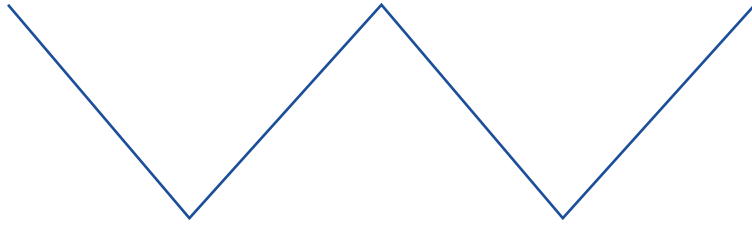

Table objects are lowered as a structured combination of path borders and text cells.

Mutation level	Example in document fuzzing
page-level	duplicate / reorder / splice page
object-level	insert text, image, path, table
attribute-level	change coordinates, colors, fonts, payload text
